

Anti Flecking Systems

The Aerogen anti flecking System is used in the metal decorating industry to remove transport grease and dust, it also stabilises the temperature of the sheet for efficient flow when coating and ensures rapid flow.

Features:-

Anti Flecking burner

- Air Knife
- Exhaust fan
- Gas valve train
- Adjustable output
- Pilot burner

The system consists of the combustion generator cabinet and associated electrical panel Anti Flecking burner air knife and exhaust extraction fan.

The system features the facility to be fully interlocked with the customer's production line. Automatic ignition is made with the blast tip pilot burner. The system also features all the required safety interlocks such as flame detection and gas pressure switches.
