

FT Double Burner Bottle Treater - Special

Description

The Aerogen 'double burner bottle flame treating station' is specifically designed for flame treating bottles prior to labeling or printing applications. It is ideally suited to plastic components that require a very high level of treatment to ensure a good adhesive seal of the label or high quality print that is scratch resistant. The system is designed to be used alongside conveyors. The control cabinet contains all required safety interlocks and controls. The system is designed to run on compressed air and gas, either natural propane or butane.

PRETREATMENT SYSTEM FOR P/E
CONTAINERS PRIOR TO LABELLING

Features

- Double burner for treating both front and backside of bottle
- Fully interlocked allowing auto shut-off of burner.
- Protective guarding preventing contact with burners.
