

Converting Laminating – Carton Board

Flame treatment of carton board and paper in the laminating process vastly improves adhesion qualities. Improved bonding strength between the board and the laminate prevents de-lamination and ultimately improves the carton quality. Flame treatment of the board also de-wicks the surface, removing loose surface fibres that may create pin holes in the laminate.

Main Applications

- Liquid Packaging
- Cartons
- Packaging Material

Benefits

- Improved Lamination Performance
- Increase of Bonding
- Improved Carton Integrity

Advantages

- Fully Automated Repeatable Process
- Environmentally Friendly
- Low Emissions
