

Converting Printing

Flame treatment offers adhesion improvement for extrusion laminates and film web surfaces on packaging to improve printing adhesion and bonding, primarily benefiting Polyethylene and Polypropylene substrates. Flame treatment raises the surface energy to a suitable level for the Rotogravure, Flexographic or Offset printing process.

Main Applications

- Liquid Packaging
- Packaging Material

Benefits

- Improved Print Adhesion
- Improved Lamination Adhesion
- Increase of Bonding

Advantages

- Fully Automated Repeatable Process
- Environmentally Friendly
- Low Emissions
